Camp4 Therapeutics Corporation

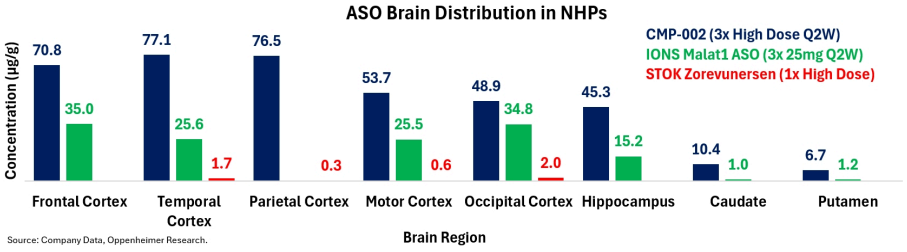

Setting Up CAMP: EU CTA Approval Highlights Continuing Execution Ahead of Readout that Could Drive 3-5x Upside

SUMMARY

We reiterate our conviction in CAMP story following EU CTA approval which supports planned initiation of PhI/II patient dosing in SYNGAP1-related disorders in 4Q26 (our initiation here). KOLs are bullish on CAMP's approach, indicating patients are contemplating moving abroad just to receive CAMP's treatment. At the CURE SYNGAP1 conference on 12/3 we will watch for the clinical trial session expected to highlight CAMP's program/trial and additional ProMMiS (natural history) longitudinal findings and feasibility of remote assessments, which could strengthen interpretation of CAMP's PhI/II exploratory endpoints. Topline PhI/II data are expected 1H28 (although we think they could come in 2H27), wherein we see potential for 3-5x upside given CAMP's EV=$75M (10K US SYNGAP1 patients) vs. STOK (EV=$1.2B, 20K US Dravet patients but an approved treatment exists).

KEY POINTS

- **Building on Argentina/Australia/UK clearances, CAMP's EU CTA approval facilitates global PhI/II initiation in 4Q26.** We expect rapid recruitment (N≈30, ages 2-18) given unmet need and strong patient advocacy/awareness. Initiating MAD dosing directly in SYNGAP1 patients, with fixed rather than weight-based doses, could accelerate optimal dose selection. Importantly, KOLs indicate patients/families contemplate relocating ex-US to participate, underscoring strong interest in CMP-002's approach and substantial unmet need.
- **We expect CHOP's ongoing ProMMiS natural history study (~YE28 completion, follow-up=2-5yrs) to augment/supplement CMP-002's development.** CAMP is leveraging ProMMiS natural history data to inform its trial design which points to **(1)** sustained/elevated seizure burden in ~84% of SYNGAP1 patients, which may limit pbo effect; **(2)** utilization of validated/established endpoints assessing behavior, development, communication, and motor function (Vineland-3, GMFM).
- **CMP-002's robust CNS distribution in NHPs (exhibit below) and bullish KOL outlook increase our confidence in PhI/II PoS.** KOLs believe CMP-002 distribution in brain following intrathecal dosing is derisked by NHP data, and antiseizure benefit in PTZ mice following ~58-63% SYNGAP protein increase suggests potential clinical benefit under CMP-002 treatment.

Oppenheimer & Co. Inc. does and seeks to do business with companies covered in its research reports. As a result, investors should be aware that the firm may have a conflict of interest that could affect the objectivity of this report. Investors should consider this report as only a single factor in making their investment decision.

For analyst certification and important disclosures, see the Disclosure Appendix.

- **High unmet need in SYNGAP1 across ~21,000 US/EU patients represents a multi-billion $ peak sales opportunity for CMP-002 (exhibit below).** Despite significant symptom burden (seizures, behavioral abnormalities, autism) on patients/families, SYNGAP1 lacks disease-modifying treatments, including anti-seizure medications (unlike Fintepla treatment in Dravet).

CMP-002 Peak Sales Opportunity Across US/EU[1]										
Diagnosis rate:		10%	20%	30%	40%	50%	60%	70%	80%	90%	100%

	80%	$0.8B	$2B	$3B	$3B	$4B	$5B	$6B	$7B	$8B	$8B
	100%	$1B	$2B	$3B	$4B	$5B	$6B	$7B	$8B	$9B	$11B

Source: Oppenheimer. **(1)** Assumes 21,000 patients; Annual treatment cost: $500,000.

- **Ahead of CMP-002 PhI/II data in 1H28, we await: (1)** CAMP's additional PMS pre-clinical data to inform opportunity across ~45,000 US patients; **(2)** STOK's PhIII data in Dravet (3Q27) that we expect to have a readthrough CMP-002 given shared objective (protein upregulation), modality (ASO), delivery (IT), and endpoint (seizure reduction). Note STOK's recent FDA alignment on multicomponent analysis (vs. hierarchical) of cognition/behavior secondary endpoints.

Stock Price Performance

INVESTMENT THESIS

CAMP is a clinical-stage company developing novel regulatory RNA-targeting therapeutics designed to upregulate gene expression with the goal of restoring healthy protein levels to treat diseases driven by protein deficiency. Lead program CMP-002 targets SYNGAP1, a severe developmental epileptic encephalopathy (DEE) caused by haploinsufficiency with no approved disease-modifying therapy. In preclinical studies, CMP-002 demonstrated robust SYNGAP upregulation which delivered functional benefit, enabling advancement into a global PhI/II. Initial CMP-002 clinical data in 1H28 can derisk target engagement/MoA and inform on disease-modifying potential.

BASE CASE ASSUMPTION

- Early CMP-002 clinical data indicate dose-dependant treatment benefit with clean safety

CATALYSTS

- **4Q26:** Initiation of FIH PhI/II trial for CMP-002 in SYNGAP1 patients
- **4Q26/Early-2027**: Initial preclinical data in PMS
- **3Q27**: STOK's Zorevunersen PhIII data in Dravet
- **2027:** PMS development candidate nomination
- **1H28:** Topline PhI/II readout for CMP-002 in SYNGAP1 patients

UPSIDE SCENARIO

- CMP-002 delivers disease-modifying data in SYNGAP1 across different endpoints

DOWNSIDE SCENARIO

- CMP-002 fails to deliver clinical benefit and/or major safety signals emerge

PRICE TARGET CALCULATION

We value CAMP with DCF methodology assuming a 12% discount rate, reflecting risk that we believe is associated with a clinical-stage biotechnology company, and a 2% terminal value growth rate and estimated $3.5B terminal FCF value in 2036, driving our 12-18-month price target of $15.

KEY RISKS TO PRICE TARGET

- CMP-002 failing to demonstrate clinical signal.
- Potential safety issues with RAP platform.
- Clinical trials progressing slower than expected.
- Potential approval and launch delays.
- Program(s) reach commercialization, but fall below peak sales expectations due to competition, reimbursement, or pricing pressure.
- We regard CAMP, as a stock selling for less than $5 per share, as speculative and appropriate for risk-tolerant investors.

COMPANY DESCRIPTION

CAMP4 Therapeutics is a clinical-stage biotechnology company developing regulatory RNA-targeting therapeutics designed to upregulate gene expression with the goal of restoring healthy protein levels to treat a broad range of genetic diseases, with a focus on CNS haploinsufficiencies.

Analyst Certification - The author(s) certifies that this research report accurately states his/her personal views about the subject securities, which are reflected in the ratings as well as in the substance of this report. The author(s) certifies that no part of his/her compensation was, is, or will be directly or indirectly related to the specific recommendations or views contained in this research report.

Potential Conflicts of Interest:

Equity research analysts employed by Oppenheimer & Co. Inc. are compensated from revenues generated by the firm including the Oppenheimer & Co. Inc. Investment Banking Department. Research analysts do not receive compensation based upon revenues from specific investment banking transactions. Oppenheimer & Co. Inc. generally prohibits any research analyst and any member of his or her household from executing trades in the securities of a company that such research analyst covers. Additionally, Oppenheimer & Co. Inc. generally prohibits any research analyst from serving as an officer, director or advisory board member of a company that such analyst covers. In addition to 1% ownership positions in covered companies that are required to be specifically disclosed in this report, Oppenheimer & Co. Inc. may have a long position of less than 1% or a short position or deal as principal in the securities discussed herein, related securities or in options, futures or other derivative instruments based thereon. Recipients of this report are advised that any or all of the foregoing arrangements, as well as more specific disclosures set forth below, may at times give rise to potential conflicts of interest.

All price targets displayed in the chart above are for a 12- to- 18-month period. For more information about target price histories, please write to Oppenheimer & Co. Inc., 85 Broad Street, New York, NY 10004, Attention: Equity Research Department, Business Manager.

Oppenheimer & Co. Inc. Rating System:

Outperform(O) - Stock expected to outperform the S&P 500 within the next 12-18 months.

Perform (P) - Stock expected to perform in line with the S&P 500 within the next 12-18 months.

Underperform (U) - Stock expected to underperform the S&P 500 within the next 12-18 months.

Not Rated (NR) - Oppenheimer & Co. Inc. does not maintain coverage of the stock or is restricted from doing so due to a potential conflict of interest.

Distribution of Ratings/IB Services Firmwide

			IB Serv/Past 12 Mos.	
Rating	Count	Percent	Count	Percent
OUTPERFORM [O]	474	67.23	205	43.25

ESG Scores: ESG scores from Refinitiv are designed to transparently and objectively measure a company's relative ESG performance, commitment and effectiveness, based on company-reported data. This covers 10 main themes including emissions, environmental product innovation, human rights, shareholders and so on. Ratings are available on close to 10,000 companies globally, with time-series data going back to 2002. The percentile rank scores are simple to understand and transparent. They are benchmarked against The Refinitiv Business Classifications (TRBC – Industry Group) for all environmental and social categories, as well as the controversies score. They are also measured against the country of incorporation for all governance categories.

Please note that all ESG ratings are independent of Oppenheimer stock ratings. They are intended to provide supplemental information regarding ESG for our covered companies. ESG ratings do not have any impact on the stock rating.
